

EIGHT SECTORS

OodelCX Industry Guide

Customer and staff feedback in banking, education, retail, healthcare, telecom, airlines, non-profit and automotive.

Industry Guide · October 2026

Written from the application code on the `main` branch. No screenshots are used.

Contents

1. How to use this guide —

8. Non-profit & NGOs — customer and staff
9. Automotive — customer and staff
10. Questions prospects ask —

How to use this guide

OodelCX works the same way in every sector: feedback arrives by QR code or link, it is turned into owned work, and the result is measured. What changes is the situation and the words. This guide gives each of the eight sectors on the OodelCX website a page for customer feedback (**Customer X**) and a page for staff feedback (**Colleague X**), written to be used in a conversation with a prospect.

SECTOR	CUSTOMER X HEADLINE	COLLEAGUE X HEADLINE
Banking & Finance	Branch feedback, routed and recorded properly.	Branch colleagues need a route that does not run through the branch.
Education	Comparing campuses on a consistent basis.	Understanding staff experience across a trust.
Retail	Finding the store and the time of day behind the average.	Retention starts with hearing colleagues early.
Healthcare	Turning patient feedback into tracked operational work.	Supporting the people who provide care.
Telecom	Seeing service problems by store, channel and theme.	Keeping service and field teams engaged.
Airlines & Aviation	Feedback at every stage of the journey.	Listening to crews and ground teams.
Non-profit & NGOs	Evidence of programme quality, from the people you serve.	Hearing staff and volunteers across sites.
Automotive	Sales and service feedback, by dealership and by visit.	Retaining technicians and service advisers.

Wording is sector-neutral (branch, campus, store, site, station, dealership) so it reads the same in any country. Colleague X in every sector means one staff survey published to every branch, readable only by the people head office chooses, with a branch left unnamed until five people there have answered.

Banking & Finance

Branch networks, with complaints recorded and routed

Customer X: customer feedback

Branch feedback, routed and recorded properly. Complaints about advice or fees need to reach the right function quickly, and the handling needs to be on record. Feedback held in branch inboxes does neither.

The challenge

A bank hears from customers at every branch and channel, but comments rarely reach one place. A service complaint and a concern about a product sale can sit in the same inbox with the same priority, and a regional lead may see neither until a quarterly review. When someone later asks who knew and what was done, the answer is hard to reconstruct.

What you can measure

- Waiting time
- Staff courtesy
- Clarity of fees and advice
- Handling of complaints
- Likelihood to recommend

How OodelCX helps

FEATURE	WHAT IT DOES
Branch-level visibility	When a branch falls below its threshold, the regional lead is notified the same day.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
A record for every case	Each case keeps its owner, replies and decision history in one timeline.
Branch comparison	Compare branches on the same categories, with each score set against its own history.

A typical moment. Branch 14: complaint about a product sale

Path: Feedback arrives by QR code or link → Case assigned to the compliance owner → Outcome recorded in the Decision Log

Colleague X: staff feedback

Branch colleagues need a route that does not run through the branch. Front-line teams see process failures first, but raising a concern with a line manager is often not an option. A separate route changes what gets reported.

The challenge

Front-line staff see process failures, target pressure and customer-handling problems before anyone else. Raising them with a line manager is not always possible, so concerns surface late, often in exit interviews.

Concerns about conduct are among those an organisation most needs to hear early.

What you can measure

- Workload
- Management support
- Training
- Tools and systems
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Branch comparison	Compare colleague results by branch. Groups with fewer than five responses are never shown.
Fixes with outcomes	Log a rota or process change and compare results before and after.
One survey, every branch	Build the staff survey once and publish it to every branch, each with its own link and QR code.

A typical moment. Branch 14: workload concern, anonymous

Path: Concern arrives by QR code or link → Seen by the people head office chose → Results read branch by branch

Education

Schools and trusts, compared term over term

Customer X: customer feedback

Comparing campuses on a consistent basis. Trusts need facilities, communication and pastoral measures from each site on the same scale, term by term, to see where support is needed.

The challenge

Parents, students and visitors raise issues with front offices, in group chats and at pick-up. Each campus handles them differently, so a trust sees a few loud issues and misses the quieter, recurring ones. Leaders need facilities, communication and pastoral measures from every site on the same scale.

What you can measure

- Facilities
- Communication with families
- Pastoral care
- Front-office service
- Catering and transport

How OodelCX helps

FEATURE	WHAT IT DOES
Campus comparison	See which site is declining before the term review.
Term-over-term trends	Every score is set against the previous term.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Recurring issue flags	The same issue raised repeatedly at one campus is flagged for review.

A typical moment. North Campus: communication score

Path: Feedback arrives by QR code or link → Score down 0.4 this term → Owner assigned, outcome measured

Colleague X: staff feedback

Understanding staff experience across a trust. Teaching staff seldom have a confidential way to raise workload or leadership concerns, so these tend to surface late, often as resignations.

The challenge

Teaching and support staff seldom have a confidential way to raise workload, leadership or resourcing concerns. Without one, these emerge late, often as resignations at the end of a term, when little can be done about them.

What you can measure

- Workload

- Leadership support
- Resources
- Professional development
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Results by location and role	Read patterns by campus and role. Groups with fewer than five responses are never shown.
eNPS each term	A trend line for the board, not a one-off survey.
Close the loop	Tell staff what changed, without identifying who raised it.

A typical moment. Science department: workload theme

Path: Concern arrives by QR code or link → Recurring for 3 weeks → Owner assigned, outcome measured

Retail

Which store and which time of day, not an average

Customer X: customer feedback

Finding the store and the time of day behind the average. A chain-wide average can conceal the single store, or trading period, where service falls short. Responses need to be traceable to both.

The challenge

A chain-wide score hides the one store, or the one trading period, where service falls short. Store managers receive a number without a reason, and head office sees averages when the fix is local and specific.

What you can measure

- Queues and waiting time
- Stock availability
- Staff helpfulness
- Store cleanliness
- Returns and refunds

How OodelCX helps

FEATURE	WHAT IT DOES
Store comparison	Compare stores on the same categories and see which one is pulling the average down.
Time-of-day patterns	Negative comments are grouped into two-hour windows, so a lunchtime queue stands out.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Playbooks for repeat issues	A recurring queue or stock problem gets the same agreed response across the chain.

A typical moment. Downtown: waiting time, midday

Path: Feedback arrives by QR code or link → 5 negative comments, 12:00–14:00 → Owner assigned, outcome measured

Colleague X: staff feedback

Retention starts with hearing colleagues early. Turnover is high in retail, so concerns need to be raised through short surveys that suit shift patterns, by QR code or link.

The challenge

Turnover is high in retail, and shift patterns make long surveys impractical. Concerns about rotas, equipment and management are raised informally, if at all, and the cost appears later as vacancies.

What you can measure

- Scheduling and rotas
- Equipment and stock handling
- Manager support
- Training
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Store comparison	Compare colleague results across stores. Groups with fewer than five responses are never shown.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Rota changes, measured	See whether a new scheduling policy moved the number.
Short, repeatable surveys	A brief survey by QR code or link fits between shifts.

A typical moment. Store 22: scheduling theme

Path: Concern arrives by QR code or link → eNPS 31 to 52 after the change → Owner assigned, outcome measured

Healthcare

Waiting-time complaints into a measured fix

Customer X: customer feedback

Turning patient feedback into tracked operational work. Patient comments often reach clinical operations as a periodic report. Facility networks need them to become owned cases with a measured result.

The challenge

Patient comments often reach clinical operations as a periodic report, long after the day they describe. Waiting time, communication and the clarity of information given are raised repeatedly, but without an owner or a measure the same issues return. Respondents can give feedback without identifying themselves.

What you can measure

- Waiting time
- Communication
- Check-in and discharge
- Cleanliness and environment
- Courtesy of staff

How OodelCX helps

FEATURE	WHAT IT DOES
Facility comparison	Compare facilities on waiting time and other rated categories.
Before and after	Measure whether a new triage or check-in flow changed the score.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Escalation chain	A case that stalls moves up the chain you define.

A typical moment. Clinic B: waiting-time complaint

Path: Feedback arrives by QR code or link → Case assigned, due in 2 days → Outcome recorded in the Decision Log

Colleague X: staff feedback

Supporting the people who provide care. Pressure on clinical teams appears first as small, repeated signals. Identifying them early supports retention and continuity of care.

The challenge

Pressure on clinical and support teams shows first as small, repeated signals: understaffing, equipment, shift patterns. Without a safe channel they surface later as absence and turnover.

What you can measure

- Staffing levels
- Equipment

- Shift patterns
- Management support
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Site-level pulse	Read results by site and role. Groups with fewer than five responses are never shown.
Staffing decisions, measured	Log a change and track the result.
Alert on a drop	A fall in Colleague Pulse or eNPS below a threshold notifies the right person.

A typical moment. Site B: understaffing theme

Path: Concern arrives by QR code or link → Seen by the people head office chose → Owner assigned, outcome measured

Telecom

Stores, service points and repeat contacts

Customer X: customer feedback

Seeing service problems by store, channel and theme. The same complaint is often logged in several places. Feedback from stores and service points needs to be grouped by theme and traced to a cause.

The challenge

Telecom providers hear from customers in stores, service centres and through their own apps, and the same complaint is often recorded more than once. Repeat contacts about billing, coverage and installation are costly, yet rarely traced to a common cause.

What you can measure

- Billing clarity
- Network and coverage
- Installation and repair
- Store and service-centre experience
- Likelihood to recommend

How OodelCX helps

FEATURE	WHAT IT DOES
Store and service-point comparison	Compare stores and service points on the same categories.
Themes across comments	Recurring topics such as billing or installation are grouped automatically.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Investigation	See the time-of-day and branch concentration behind a drop in a category.

A typical moment. Store 9: billing confusion

Path: Feedback arrives by QR code or link → 12 mentions of billing this month → Owner assigned, outcome measured

Colleague X: staff feedback

Keeping service and field teams engaged. Contact-centre and field staff meet customer problems first. Tools, scripts and targets affect them before they affect the numbers.

The challenge

Contact-centre and field staff carry the pressure of customer problems. Scripts, tools and targets affect them first, but the signals are spread across teams, shifts and sites.

What you can measure

- Workload and targets

- Tools and systems
- Manager support
- Training
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Team and site comparison	Compare colleague results by site. Groups with fewer than five responses are never shown.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Changes, measured	Log a change to a script or tool and compare results before and after.
Pulse over time	Colleague Pulse and eNPS are tracked as a trend, not a single survey.

A typical moment. Service centre: tools theme

Path: Concern arrives by QR code or link → Recurring for 3 weeks → Owner assigned, outcome measured

Airlines & Aviation

Feedback at each stage of the journey

Customer X: customer feedback

Feedback at every stage of the journey. A journey passes through check-in, boarding, the flight and baggage, run by different teams. Feedback needs to be traceable to a stage and a place.

The challenge

A journey passes through booking, check-in, boarding, the flight and baggage, run by different teams and sometimes different companies. Feedback tends to arrive late, by email, and is hard to attribute to a stage or a location.

What you can measure

- Check-in and boarding
- Cabin service
- Punctuality and communication
- Baggage handling
- Lounge experience

How OodelCX helps

FEATURE	WHAT IT DOES
Feedback points by location	Place a QR code at a gate, lounge or baggage hall, or send a link after the flight.
Station comparison	Compare airports or stations on the same categories.
Trends over time	Every score is set against its own history.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.

A typical moment. Station C: baggage-claim wait

Path: Feedback arrives by QR code or link → Concentrated in one time window → Owner assigned, outcome measured

Colleague X: staff feedback

Listening to crews and ground teams. Crews and ground staff work in shifts and across locations. Short surveys by QR code or link reach people who are rarely in one place.

The challenge

Crews and ground staff work in shifts, across locations and often away from base. Concerns about rosters, rest and equipment are difficult to collect from people who are rarely together.

What you can measure

- Rosters and rest
- Equipment and tools

- Management support
- Training
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Short surveys by link or QR	A brief survey suits people who are rarely in one place.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Base comparison	Compare colleague results by base. Groups with fewer than five responses are never shown.
Roster changes, measured	Log a change and compare results before and after.

A typical moment. Base 2: rostering theme

Path: Concern arrives by QR code or link → Recurring for 3 weeks → Owner assigned, outcome measured

Non-profit & NGOs

Programme feedback for funders and boards

Customer X: customer feedback

Evidence of programme quality, from the people you serve. Funders and boards ask what was delivered and what participants thought of it. Feedback from many locations needs to be comparable and recorded.

The challenge

Non-profits report to funders and boards on what was delivered and, increasingly, on what participants thought of it. Feedback is gathered at workshops and distribution points in many locations, but is often compiled by hand, late and unevenly.

What you can measure

- Session quality
- Facilitator
- Relevance of content
- Accessibility and inclusion
- Likelihood to recommend

How OodelCX helps

FEATURE	WHAT IT DOES
Comparison by event and facilitator	Compare sessions, locations and facilitators on the same questions.
Programme evaluation	Compare what a training set out to deliver with what participants said.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Reports for funders and boards	Export a structured report for any period.

A typical moment. Workshop, Site A: relevance score

Path: Feedback arrives by QR code or link → Compared with the previous cohort → Outcome recorded

Colleague X: staff feedback

Hearing staff and volunteers across sites. Teams work across offices and field locations, often with limited resources. Strain tends to show as turnover rather than as complaints.

The challenge

Staff and volunteers work across offices and field locations, often with limited resources and high commitment. Strain tends to appear as turnover rather than as complaints, and concerns about managers are hard to raise in small teams.

What you can measure

- Workload
- Safety and wellbeing
- Resources
- Management support
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Location comparison	Compare colleague results by location. Groups with fewer than five responses are never shown.
Changes, measured	Log a change and compare results before and after.
One survey, every branch	Build the staff survey once and publish it to every branch, each with its own link and QR code.

A typical moment. Field office: workload theme

Path: Concern arrives by QR code or link → Seen by the people head office chose → Results read branch by branch

Automotive

Sales and service, by dealership and visit

Customer X: customer feedback

Sales and service feedback, by dealership and by visit. Purchase and service are run by different teams in different places. Feedback needs to stay separate for each and arrive while the visit is recent.

The challenge

Manufacturers and dealer groups depend on both the purchase and the service experience, which are handled by separate teams, often on separate sites. Feedback sits in manufacturer surveys and online reviews, and a dealership sees it long after the visit.

What you can measure

- Sales experience
- Service quality
- Time to complete a repair
- Communication
- Likelihood to recommend

How OodelCX helps

FEATURE	WHAT IT DOES
Dealership comparison	Compare dealerships and service centres on the same categories.
Separate feedback points	Use separate QR codes or links for sales, service and delivery.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Before and after	Measure whether a change to the service process moved the score.

A typical moment. Dealership 7: service waiting time

Path: Feedback arrives by QR code or link → Case assigned, due in 2 days → Owner assigned, outcome measured

Colleague X: staff feedback

Retaining technicians and service advisers. Skilled technicians are hard to hire and costly to replace. Concerns about equipment, workload and scheduling are usually raised informally.

The challenge

Technicians and service advisers are hard to hire and costly to replace. Concerns about workshop equipment, workload and scheduling are usually raised informally, and rarely reach the people who can change them.

What you can measure

- Workshop equipment

- Workload and scheduling
- Training
- Management support
- Likelihood to recommend (eNPS)

How OodelCX helps

FEATURE	WHAT IT DOES
Site comparison	Compare colleague results by site. Groups with fewer than five responses are never shown.
Seen only by people you choose	Staff responses go to the people head office picks, never to a line manager by default.
Changes, measured	Log an equipment or scheduling change and compare results before and after.
Short surveys by QR or link	A brief survey fits around the workshop day.

A typical moment. Service centre: equipment theme

Path: Concern arrives by QR code or link → Recurring for 3 weeks → Owner assigned, outcome measured

Questions prospects ask

QUESTION	ANSWER
Do my customers need an app?	No. They scan a QR code or open a link on their phone.
Can staff be identified?	No name, email or phone is collected, and a branch is not named until five people there have answered. Comments that name a person can still identify them, so staff are asked not to.
Who sees staff answers?	The group owner and people head office chooses. Branch managers see nothing.
How do we know it is working?	CX Pulse measures how well feedback is handled, the Decision Log measures before and after each change, and Compass shows whether the organisation's own picture matches what it actually does.
What do we do first?	Take Compass, publish one survey, set owners for the top categories and the escalation chain.
