

HOW THE WHOLE SYSTEM WORKS

OodelCX: The Complete Journey

From the first demo to proving the fix worked, step by step, with what is live and what is not.

Journey · October 2026

Written from the application code on the `main` branch. No screenshots are used.

Who is in this story

PERSON	ROLE IN THE JOURNEY
OodelCX Admin	Creates accounts, prices them, sets survey templates and Compass questions, approves AI reports, watches platform health.
Group owner	Runs a company with several branches. Builds surveys once, sees every branch, sets the escalation chain.
Business owner	Runs one location or one branch. Works cases, sets alert rules and owners.
Team member	Works inside one account. Full members see everything but billing; limited members see only their own cases.
Customer (respondent)	Scans a QR code or opens a link and answers. No login.
Colleague	Answers the anonymous staff survey. No login, no name.

Five places people land

WHERE	WHO	NOTE
Admin portal	OodelCX staff	The only view across every customer.
Business portal	Business owners and team members	The same portal for a stand-alone business and for a branch; a branch sees Customer X only.
Group portal	Group owners and team members	Only for customers with several branches.
Public survey form	Customers and colleagues	No login.
Public website	Prospects	Five pages and a demo form.

The journey follows the OodelCX loop, the **5Cs**: Capture, Clarify, Claim, Close, Confirm.

Stage 0. Before they are a customer

STEP	STATUS	WHAT HAPPENS
A prospect visits the website and books a demo	Live	The request lands in Admin > Contact Messages and is emailed to the team.
Admin creates the account	Live	Products, plan limits, price, who pays, escalation chain and the owner's login. The owner receives a welcome email.

Stage 1. Assess: where do we stand today?

STEP	STATUS	WHAT HAPPENS
Leadership takes the Compass assessment (ANCHOR)	Live	Six areas, a short ladder question each. Result: Established or Emerging, with the area holding the account back.
The system checks the answers against real activity (Evidence Fusion)	Live	Each area is tagged confirmed, overstated, understated or not enough data.
REACH recommendation cards	Live	One card per weak or overstated area: Recognize, Elevate, Align, Connect, Habituate.
Retake and see progress	Live	Retake when due. History shows movement.

Stage 2. Set up

STEP	STATUS	WHAT HAPPENS
Build surveys (Draft, Live, Closed)	Live	Nine question types, QR and link, quota and dates. Draft has a link but refuses answers.
Group publishes one survey to chosen branches	Live	One link and QR code per branch.
Category owners, alert rules, escalation chain, playbooks	Live	Decide in advance who owns what and when something moves up.
Team members	Live	Added by Admin with per-person page access.
Staff lists, personal links, onboarding and exit surveys	Dropped	Left out on purpose; Colleague X is one anonymous survey.

Stage 3. Capture

STEP	STATUS	WHAT HAPPENS
A customer scans a QR code or opens a link and answers	Live	Under a minute, no app or login. Respondent details are shown; email is optional.
A colleague answers the staff survey	Live	No identity collected. An anonymity line is shown.
The answer is stored and scored at once	Live	A very low answer opens a case (up to five per location per day).

Stage 4. Clarify: make sense of it

STEP	STATUS	WHAT HAPPENS
Analytics: CSAT, CES, NPS, drivers, themes, trends	Live	Per period, with confidence labels for small samples.
Root cause investigation	Live	The system gathers the evidence and explains it, labelled likely, inferred or uncertain.
Highlights	Live	Strong positive comments and themes from the last 90 days.
Business Value	Live	Value at stake in negative feedback, from figures the owner enters.
Program Evaluation	Live	A training aim compared with what feedback said.
AI Insights reports	Live	Drafted on a schedule; shown only after an Admin approves.

Stage 5. Claim: someone owns it

STEP	STATUS	WHAT HAPPENS
An alert email when a threshold is crossed	Live	Score decline, sudden drop, outlier branch or NPS floor. Email only.
A case with an owner and a due date	Live	From a very low response, by hand with one click, or from a recurring issue.
A playbook attaches	Live	A checklist for recurring issues.
Escalation with a full path	Live	One Escalate button, a preview of who receives it, Step back, and a permanent history that shows the originator.
Attention Centre	Live	What needs action now.

Stage 6. Close: reply and record

STEP	STATUS	WHAT HAPPENS
Reply to the customer from the case	Live	If they left an email. Recorded on the timeline.
Decision Log with a before and after	Live	Drafts from resolved cases are confirmed by a person; results are measured on a schedule.
Improvement Initiatives	Live	A recurring problem becomes a tracked project.

Stage 7. Confirm: is it working?

STEP	STATUS	WHAT HAPPENS
CX Pulse	Live	A measured score of how well feedback is handled, with a line saying what would move you up.
Compass again	Live	The next retake shows whether the gaps closed.

And then it loops. Every retake, case and decision feeds back into Capture and Clarify. It is a cycle, not a pipeline.

Underneath everything

ITEM	STATUS	NOTE
Billing in Stripe with custom prices and who-pays rules	Live	One open checkout at a time; each Stripe event handled once.
Roles and permissions enforced on the server	Live	Not only hidden in the menu.
Two-factor sign-in, audit log	Live	
Platform Health with scheduled-job status	Live	Shows setup gaps.
Ask OodeICX, 1BYTE, external feedback, integrations, single sign-on	Later	Considered; not built.

Every feature in one table

GROUP	FEATURE	STATUS
Capture	Surveys by QR and link; nine question types; two layouts; Draft, Live, Closed; central publishing to branches; events and quotas	Live
Capture	Anonymous staff survey with a five-answer small-branch rule	Live
Clarify	Analytics, themes, drivers, root cause, Highlights, Business Value, Program Evaluation, AI Insights, CX and EX correlation	Live
Claim	Cases, automatic case rule, owners, alert rules, playbooks, escalation, Attention Centre	Live
Close	Reply to customer, Decision Log, Improvement Initiatives	Live
Confirm	CX Pulse, Compass (ANCHOR), Evidence Fusion, REACH	Live
Platform	Billing, roles, 2FA, audit log, feature switches, Platform Health, Admin CMS	Live
Later	Ask OodeICX, 1BYTE, external feedback sources, integrations, single sign-on	Later
Dropped	Staff lists, staff personal links, onboarding and exit surveys, staff cases, staff emails, confidential routing	Dropped
