

FEEDBACK FROM YOUR OWN PEOPLE

OodelCX Volume B: Colleague X

One anonymous staff survey, published to every branch and read by the people you choose.

Volume B · October 2026

Written from the application code on the `main` branch. No screenshots are used.

Contents

1. How to read this volume — the model in one picture
2. 1. The promise — anonymous, and its limits
3. 2. Getting started — who sees what
4. 3. Building and publishing — one survey, many branches
5. 4. What staff see —
6. 5. Reading the results — eNPS, Colleague Pulse
7. 6. What happens after an answer — simpler than Customer X
8. 7. Customer and colleague together —
9. 8. Money, data, what to tell staff —
10. 9. Problems solved and honest limits —

How to read this volume

Volume A covers listening to your customers. Volume B covers listening to the people who work for you. Volume C is the internal manual for the OodelCX team.

Colleague X is the same OodelCX platform pointed inwards. Instead of a QR code on a counter, your people get a short anonymous survey. Instead of star ratings and CSAT, the headline number is **eNPS** (employee Net Promoter Score). It is deliberately **simple**: head office builds one staff survey, publishes it to its branches, and reads the answers. There are no personal links, no staff lists, no onboarding or exit surveys and no staff cases or emails. This volume says what is there and what is not.

Who this is for: the owner or manager of a group (or a stand-alone business) that has Colleague X switched on, and the HR, operations or people lead who reads the answers. You do not need to be technical.

The model in one picture

STEP	WHO	WHAT HAPPENS
1	Head office	Builds one staff survey and ticks the branches that should get it.
2	System	Creates one link and QR code per branch, all for the same survey.
3	Staff	Scan the code at their branch and answer in under a minute. They give no name.
4	Chosen readers	Head office and the people it has chosen, such as the HR head, read every answer from the very first one.
5	Branch	Branch managers do not see staff answers at all.

1. The promise: anonymous, and what that really means

Problem solved. People only tell the truth about their workplace when they believe it is safe. If staff suspect a survey can be traced to them, they give polite answers and the survey is worthless. Colleague X is built so that the business does not learn who said what, and so the numbers cannot be used to point at one person. This section explains how, and where the protection stops, because you will need to explain it to your own people.

#	PROTECTION	WHAT IT MEANS IN PRACTICE
1	No identity is collected	A staff survey never asks for a name, email or phone number. This is enforced on the server: even if someone altered the form and sent a name, it is discarded before saving.
2	Age and gender are off by default	Demographic questions are not asked unless head office switches them on for a survey. Fewer questions means fewer ways to identify someone.
3	A small branch is not named	A branch's name and score are hidden until at least five people at that branch have answered. Until then head office still reads the answers and they still count in the group total, but nobody can pick out a branch of two people.
4	Chosen readers only	Staff answers are visible only to the group owner and to team members whose access has not been restricted for staff pages. A branch owner and branch team members see no staff pages.
5	No automatic AI screening	Comments are not scanned or routed. A person reads them.
6	An anonymity line on every form	Staff see a short line stating the survey is anonymous. Admin can edit the wording.

Where the protection stops. Anonymity depends on what people write. A comment that names a person or a very particular event can identify its author. The survey records the time and the type of device the answer came from, not who the person is. Tell your people not to put names in comments. The small-branch rule hides a branch's *name* below five answers, but head office readers still see the answers themselves, so choose who can read them with care.

2. Getting started

Switching Colleague X on

Problem solved. Colleague X is a separate product with its own cost, so it should only appear when you have bought it.

Where. Done by OodelCX in Admin.

How to use it.

1. OodelCX switches on Colleague X for your account or group.
2. If your account has both products, a Customer / Colleague switch appears at the top of the menu. If it has only Colleague X there is no switch.

What happens next. The menu shows only the pages for the product you are viewing.

PERSON	WHAT THEY SEE FOR COLLEAGUE X
Group owner	Everything: survey publishing, every response, results by branch.
Group team member	Staff pages unless OodelCX has restricted them for that person. To let someone read staff answers, ask OodelCX to confirm their access.
Stand-alone business owner	The same pages for the one location.
Branch owner or branch team member	Nothing. Staff feedback is a head-office matter.

3. Building and publishing the staff survey

Publish one survey to many branches

Problem solved. If every branch builds its own survey you cannot compare the answers, and staff at different sites are asked different things.

Where. Group portal > Feedback Points > build a survey (with Colleague selected).

How to use it.

1. Choose Colleague X as the product and build the survey. Start from the Colleague Pulse template or write your own questions.
2. Under 'Publish to these branches' tick the branches. All are ticked by default.
3. Press **Publish**, or **Save as draft** to prepare it first. A draft has links and QR codes but refuses answers.
4. Open the QR dialog on each branch's survey and print the poster for the break room.

What happens next. One feedback point is created per ticked branch, each with its own link and QR code. All carry the same questions. Press Close on a survey to stop it and Reopen to restart it.

Keep the demographic questions off unless you have a clear reason. Each one makes it easier to work out who answered.

4. What staff see

Staff scan the QR code or open the link on their own phone. They see a short survey, the anonymity line and a thank-you. They are never asked to log in and never see OodelCX itself. A typical Colleague Pulse survey asks how the shift was, how likely they are to recommend working here (the eNPS question), and an optional comment. The categories behind the questions are things like Management Support, Growth Opportunities, Work-Life Balance, Team Culture and Compensation Fairness.

5. Reading the results

PAGE	WHAT IT SHOWS	NOTES
Raw Feedback (Colleague)	Every staff response, newest first, with filters for date, survey and branch.	Head office sees all answers from the first. A branch with fewer than five answers is not named and cannot be filtered on.
Dashboard and Overview	eNPS, Colleague Pulse, scores by category and trends.	Group totals include every branch's answers, even a branch under five.
Branches and Compare	Each branch's score and rank.	A branch under five answers shows a count only, with no score.
Analytics and Insights	Themes in comments, drivers, AI-written reports.	Reports reach you only after OodelCX has approved them.
Highlights	Strong positive staff comments, to recognise good work.	Branch scores follow the same five-answer rule.
CX and EX correlation	Whether staff sentiment at a location moves with customer sentiment.	Needs enough answers on both sides; hidden branches show nothing.

eNPS and Colleague Pulse

Problem solved. Leadership asks one number, 'would people recommend working here', and it should have a trend, not a snapshot.

Where. Overview or Dashboard with Colleague selected; Confirm > Colleague Pulse.

How to use it.

1. eNPS is the share of promoters (9 to 10) minus the share of detractors (0 to 6).
2. Colleague Pulse is the same maturity measure as CX Pulse, applied to how well colleague feedback is acted on: awareness, response speed, ownership, culture and measured outcomes.
3. Compass has staff versions of its questions, so it can assess colleague listening in the same way (see Volume A, section 6).

What happens next. Both update on a schedule.

6. What happens after an answer

This is where Colleague X is deliberately simpler than Customer X.

CUSTOMER X	COLLEAGUE X
A very low answer opens a case with an owner	No case is opened. Staff answers are read, not tracked as cases.
Alert rules email an owner	Not used for staff answers.
Reply to the customer from the case	No staff reply and no staff emails.
Playbooks and escalation on cases	Not used for staff answers.
Decision Log, Improvement Initiatives	Available: log a rota or policy change and compare results before and after.

When head office decides to change something because of staff feedback, record it in the Decision Log. Colleague Pulse and eNPS then show whether the change helped.

7. Customer and colleague together

If you run both products, the switch at the top flips every screen between them. The two are never mixed in one figure. The correlation page compares them branch by branch, and only where there is enough data on both sides. In a group, branches keep seeing Customer X only.

8. Money, data and what to tell your people

TOPIC	WHAT TO KNOW
Billing	Colleague X is priced separately from Customer X. OodelCX sets the price on your account; you pay from Billing.
Data	Responses are stored without identity. Time of answer and device type are kept. Responses are not shared outside your account.
What to tell staff	The survey is anonymous. No name is asked. Do not write names in comments. Only head office and the people it chose can read the answers. Small branches are not named in results.

9. Problems solved and honest limits

PROBLEM	HOW COLLEAGUE X HELPS	LIMIT
Staff fear being traced	No identity is collected	Comments can still identify a person if they name one
Branches build different surveys	One survey, published to every branch	The branch cannot change it
Head office hears too late	Every answer is readable from the first	A small branch is not named in results
Managers read what staff say about them	Branch managers see nothing	Group readers must be chosen carefully
Staff concerns need an owner	Not built for staff answers	Use the Decision Log to record changes; there are no staff cases

Not in Colleague X today: staff lists, personal survey links, onboarding or exit surveys, staff cases, staff emails, confidential routing to a named person, and automatic scanning of comments. These were considered and left out on purpose to keep the product simple and the anonymity promise easy to explain.
